# Seleen Al Smart Insights

```
SMART INSIGHTS
Get proactive recommendations tailored to your store.
[Today]
[Card 1: Conversion Insight]
Chart [Icon] "Your conversion rate dropped by 10%."
       - Metric: 1.8% (↓0.2 from last week)
       - Why it matters: Potential loss in revenue
       - Next step: Optimize product page, checkout
       - [Learn more] [Like | Dislike]
[Card 2: Marketing Insight]
Chart [Icon] "Your ROAS for Facebook ads increased
            by 5%."
       - Metric: 3.2 → 3.4
       - Why it matters: Opportunity to scale ads
       - Next step: Increase budget on FB ads
       - [Learn more] [Like Dislike]
[Card 3: Inventory Insight]
Chart [Icon] "Top-selling product is low on inventory."
       - Metric: <50 units left
       - Why it matters: Risk of stock-outs
       - Next step: Restock or switch ad focus
       - [Learn more] [Like Dislike]
```

## 1. Overall Layout and Positioning

#### 1. Placement on the Dashboard

- Keep "Smart Insights" as a prominent section on your main dashboard, just below "Get Started with Seleen AI" (as shown in your screenshot).
- Make it a visually distinct card or container that users can quickly scan.

#### 2. Section Header & Subtitle

- **Title**: "Smart Insights"
- **Subtitle (short)**: A concise statement such as "Get proactive recommendations tailored to your store's performance."
- **Tooltip or Info Icon**: Offer a quick explanation of what "Smart Insights" are (e.g., "Seleen Al analyzes your store metrics to highlight areas for improvement and growth.").

## 2. Structure of the Insights

### A. Cards or Rows for Each Insight

- Card Layout: Each insight is presented as a card with:
  - A short **title** or headline (e.g., "Your conversion rate has dropped 10% this week").
  - A summary of the key metric or trend (e.g., "Conversion rate: 1.8% ↓ from 2.0% last week").
  - A **suggested action** or recommendation (e.g., "Consider testing new product page layouts to improve conversions.").
  - A Learn More / See Details link that takes the user to a deeper analysis page or a modal window with more context.

### B. Categorize Insights (Optional, but recommended for clarity)

You could group insights by relevant themes, such as:

#### 1. Conversion & Funnel Insights

• E.g., "Where customers are dropping off," "Checkout issues," "A/B test suggestions."

#### 2. Marketing & Traffic Insights

 E.g., "Ad ROAS changes," "High-performing channels," "Potential marketing optimizations."

#### 3. Product & Inventory Insights

• E.g., "Low stock on top sellers," "Bundling opportunities," "Slow-moving SKUs."

#### 4. Customer Behavior & Retention Insights

• E.g., "Repeat customer rate changes," "Customer cohort anomalies," "Opportunities for loyalty programs."

This categorization can be done via **tabs** or **expandable accordions** to keep the UI clean if there are many insights.

## 3. Key UI Elements for Each Insight

Below is a recommended breakdown of what each insight "card" or "row" should contain:

#### 1. Icon / Visual Cue

• Helps the user quickly distinguish the type of insight (e.g., a bar chart icon for analytics, a funnel icon for conversion issues, etc.).

#### 2. Headline

 Brief but descriptive: "Conversion rate dropped by 10% over the last 7 days."

#### 3. Key Metric & Trend

• Show the relevant metric (e.g., 1.8% conversion rate) with an up/down arrow or color indicator (red for negative trend, green for positive).

#### 4. Short Explanation

• One or two lines explaining what happened and *why* it matters. Keep it high-level in the card view.

#### 5. Recommended Action

- "Test different landing page headlines," "Optimize images," or "Retarget high-intent users."
- This is critical to make the insight feel actionable rather than just informational.

#### 6. Link to Deeper Analysis

• "Learn more" or "View detailed report" that opens a dedicated page or modal with deeper breakdowns (charts, data tables, additional context).

#### 7. Feedback Mechanism (Optional)

- A simple thumbs-up / thumbs-down or "Was this insight helpful?" question to let the Al learn from user feedback.
- Over time, you can use this data to personalize which insights appear first.

## 4. Interaction & Navigation

#### 1. Time Range Filters

• Let users choose a date range (e.g., 7 days, 14 days, 30 days). The insights should refresh based on the selected timeframe.

### 2. Insight Priority

 You might highlight "urgent" or "high-impact" insights at the top with a subtle tag or label (e.g., "High Impact").

#### 3. Collapsible Sections

 If you have many insights, consider letting users collapse or expand categories.

## 5. Visual Hierarchy

### 1. Use Contrasting Colors or Card Backgrounds

• Each insight card can have a light background or subtle border to visually separate it from other dashboard sections.

### 2. Highlight the Metric Change

• Use color coding (green for positive changes, red for negative) and small arrows or icons to denote up/down trends.

## 3. Consistent Typography

• Keep headings, subheadings, and body text consistent with the rest of your dashboard design.
